

Please review the following mockup and implement the best solution you can, minimizing the number of calls made to the web service. This is an opportunity for you to showcase to us your depth-of-knowledge of, and ability to code using, HTML, JavaScript, CSS & Code Behind. As such the more you limit your use of 3rd party libraries and tool-generated code the better. Ideally your solution will be completely hand-written and will demonstrate to us an impressive understanding of the technologies being used. However you choose to implement your solution please make sure you are able to explain and justify any design or coding decisions you have made. If you have any questions please email us at recruitment@timewatch.com.
